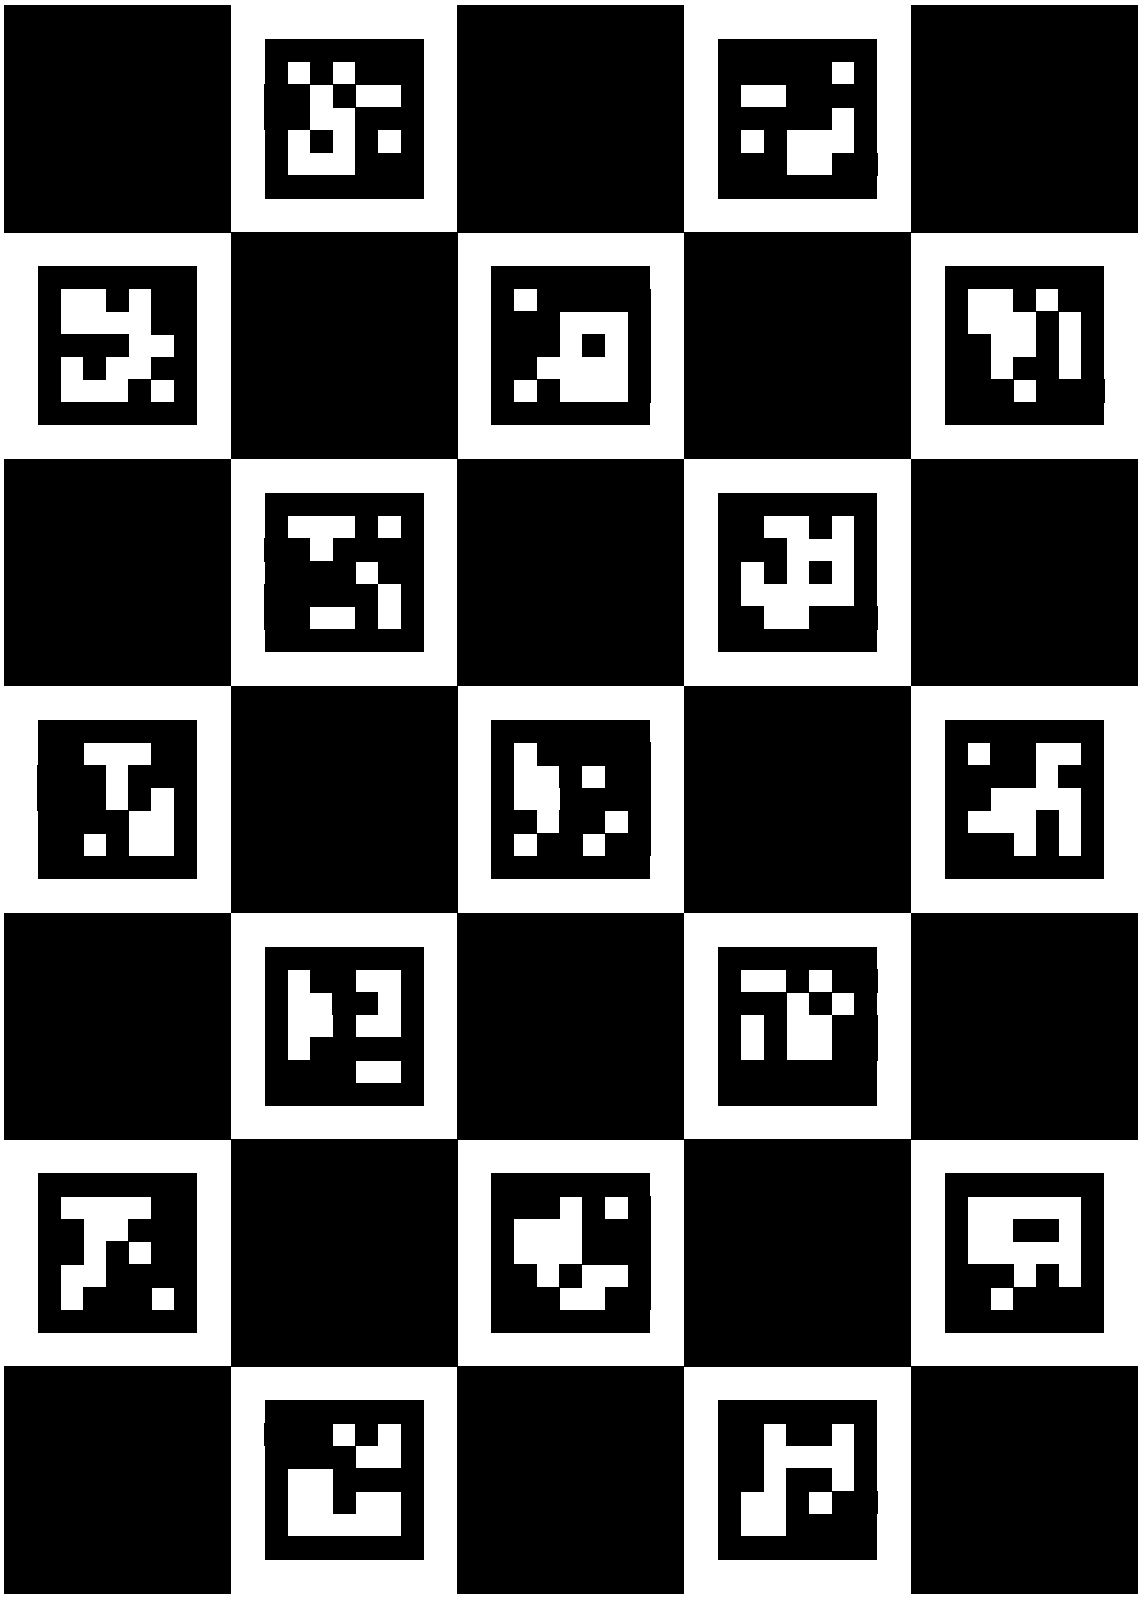
MIRROR calibration target mirror_charuco_v1 (5 x 7 ChArUco, 30 mm squares, 21 mm markers, DICT_5X5_100)

Paper: A4. Board 150 x 210 mm. Keep the white border around the board.

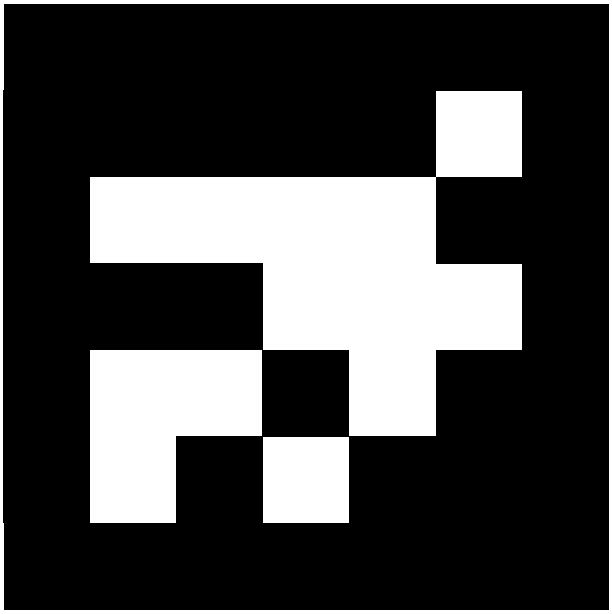


50 mm: measure this bar

1. Print at 100% / 'Actual size'. Do not use 'Fit to page'.
2. Measure the 50 mm bar with a ruler. Enter what you measure; reprint if it is off by more than 1 mm.
3. Measure one board square (nominal 30.0 mm) and enter it too.
4. Glue the sheet flat onto stiff card. A curled or wavy board gives wrong calibration.
5. Lens: wave the board in front of each phone (12+ views, tilted, filling the corners).
6. Table: lay it flat where the action happens, film 3 s with both phones, then remove it.
7. Repeat step 6 whenever a phone moves, zooms or changes resolution.

MIRROR sync card (marker 90)

Hold it where BOTH phones see it, then turn it face down quickly.
Do this at the start and again at the end of every take.



50 mm: measure this bar
